HEMANTH PONUGOTHI

Cloud / DevSecOps Engineer

Paris, France | +33 7 75 71 23 98 | hemanthponugothi@gmail.com | linkedin.com/in/hemanth260800 | github.com/Hemanth26080

Work authorization: French APS permit valid until Oct 2027 (full work rights in France). Open to relocation or remote roles across Europe.

PROFESSIONAL SUMMARY

DevSecOps and Cloud Security engineer with 2+ years of enterprise experience at Capgemini supporting financial systems processing millions of transactions. Built full DevSecOps pipelines on AWS from scratch — Jenkins CI/CD, Trivy scanning (0 critical CVEs), Terraform IaC, SonarQube SAST, Prometheus + Grafana observability — cutting manual infrastructure setup by 90%. MSc in Cloudification & Data Security (Paris). Seeking DevSecOps, Cloud, or SRE roles across Europe.

TECHNICAL SKILLS

- **Cloud & IaC:** AWS (VPC, EC2, RDS, IAM, S3, Secrets Manager, ECR, EKS), Terraform, Ansible
- **CI/CD & DevSecOps:** Jenkins, GitHub Actions, Docker, Kubernetes, Pipeline-as-Code, Shift-Left Security
- **Security Scanning:** Trivy (image & filesystem), SonarQube (SAST), OWASP ZAP (DAST), bandit, flake8, STRIDE
- **Observability:** Prometheus, Grafana, Loki, Promtail, Alertmanager, ELK Stack, CloudWatch
- **Development:** Python 3.11, Flask, REST API, pytest, MySQL, Bash scripting, Git
- **Systems & Legacy:** Linux (RHEL), TCP/IP, COBOL, JCL, DB2, CICS, VSAM

PROJECTS

SecureCloud-Flask — DevSecOps Pipeline on AWS *github.com/Hemanth26080/SecureCloud-Pipeline*

- Achieved 0 high/critical CVEs in production via a 9-stage Jenkins pipeline (lint, SAST, unit tests, Docker build, Trivy scan, staging, approval, deploy, health check) with Trivy exit-code enforcement
- Eliminated hardcoded credentials with AWS Secrets Manager (30-day auto-rotation) and EC2 IAM instance profiles
- Provisioned a fully automated, least-privilege AWS environment (VPC, public/private subnets, NAT gateway, encrypted RDS MySQL) via Terraform IaC — zero manual console configuration
- Deployed Prometheus + Grafana monitoring with Alertmanager Slack alerts; documented STRIDE threat model and SRE incident runbook

AWS Infrastructure Security Platform — Terraform IaC *github.com/Hemanth26080/aws-infrastructure-security-platform*

- Designed a modular Terraform solution deploying secure, scalable AWS environments following security-by-design principles
- Built a VPC with public/private subnets, bastion host, and site-to-site VPN; configured ALB/NLB with ACM SSL termination and CloudFront CDN; isolated RDS in a private subnet

Three-Tier Application on AWS EKS — IaC & Kubernetes *github.com/Hemanth26080/Three-Tier-EKS*

- Deployed a production-style 3-tier app (React, Node.js, MongoDB) on Amazon EKS with full cluster and networking layer provisioned via Terraform
- Built and published multi-platform Docker images to Amazon ECR; orchestrated Kubernetes workloads (Deployments, Services, Secrets, Namespaces) via kubectl
- Improved resilience with AWS Load Balancer Controller and Cluster Autoscaler; secured runtime via Kubernetes Secrets; set up Prometheus + Grafana dashboards

EXPERIENCE

Data Analyst — Mainframe Production Engineering, Capgemini (India) *Sep 2022 – Aug 2024*

- Engineered and maintained 10+ enterprise mainframe modules (COBOL, JCL, CICS, VSAM, DB2) supporting financial pipelines processing millions of records per batch cycle
- Achieved zero-defect production releases across a 2-year tenure
- Reduced MTTR for production incidents by 30%+ with systematic RCA runbooks and debugging playbooks — discipline now applied to cloud SRE work
- Automated daily operational tasks with Python and Bash scripts under Git version control; collaborated with 8+ engineers across 3 geographies on quarterly releases

PROFESSIONAL TRAINING

DevOps Engineering Program — JoinDevops (Remote) *Sep 2025 – Mar 2026*

- Intensive hands-on training in Docker, Kubernetes/EKS, Terraform, Ansible, Jenkins, and GitHub Actions with production-style AWS labs (HA, auto-scaling, backup/recovery, disaster recovery)
- Ran root-cause analysis on Kubernetes, pipeline, Terraform, and Nginx 502/504 issues; observability with Prometheus, Grafana, ELK, CloudWatch; cut simulated incident resolution time by 60%

EDUCATION

MSc Digital Marketing & Influencer Strategies — ICN Business School, Paris *Sep 2025 – Sep 2026*
MSc Cloudification & Data Security — Top Tech College, Paris *Sep 2024 – Jul 2025*
BTech Electronics & Communication Engineering — JNTU Hyderabad *2019 – 2022*

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate (in progress)** ● **Docker Foundations Professional Certificate — Docker Inc. (Mar 2026)**
- **Career Essentials in GitHub — GitHub & LinkedIn Learning (Oct 2026)** ● **Google IT Support Specialization — Google / Coursera (2021)**
